DATE MAILED: 07/14/2004

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 10/615,478	Applicant(s) LIM ET AL.	
	Examiner Asok K. Sarkar	Art Unit 2829	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 08 July 2003.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-20 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 08 July 2003 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Objections

1. Claim 18 is objected to because of the following informalities: The claim should depend on claim 17 instead of claim 15 because the annealing process is stated as a limitation in claim 17. Appropriate correction is required.

Claim Rejections – 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1 – 4, 11, 12 and 15 are rejected under 35 U.S.C. 102(e) as being anticipated by Lin, US 6,746,925.

Regarding claim 1, Lin teaches a method of forming a gate in a semiconductor device, comprising the steps of:

- forming a gate pattern on which a gate oxide film 204 and a conductive layer 206 are stacked at a give region on a semiconductor substrate 202 with reference to Fig. 2A; and
- performing oxygen plasma treatment to form oxide film 208 at the sides of the conductive layer 206 with reference to Fig. 2B in column 4, lines 1 – 35.

Regarding claims 2 – 4, Lin teaches gate oxide film of silicon oxide or high – k

Art Unit: 2829

oxide such as HfO₂ in column 3, lines 19 – 67.

Regarding claim 11, Lin teaches plasma treatment by applying the RF source power of 100 - 3000W and RF bias power of 0 – 100 W in column 5, lines 28 – 30.

Regarding claim 12, Lin teaches plasma treatment by oxygen in column 4, line 34.

Regarding claim 15, Lin teaches plasma treatment at substrate temperature of 0 – 450 °C in column 5, lines 7 – 15.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation

Art Unit: 2829

under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

7. Claims 5 – 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lin, US 6,746,925 in view of Mandelman, US 6,720,630.

Regarding these claims, Lin fails to teach detailed structure of the gate stack comprising, a polysilicon film, an anti-diffusion film, a metal film and a hard mask.

Mandelman teaches forming a gate stack comprising, a polysilicon film, an anti-diffusion film of TaSiN or WN, a metal film of W and a hard mask of nitride for the benefit of providing a diffusion free low resistivity gate structure for MOSFET devices with reference to Fig. 2 and in column 4, lines 13 – 62.

Therefore, it would have been obvious to one with ordinary skill in the art at the time of the invention to modify Lin and form the gate stack comprising, a polysilicon film, an anti-diffusion film of TaSiN or WN, a metal film of W and a hard mask of nitride for the benefit of providing a diffusion free low resistivity gate structure for MOSFET devices as taught by Mandelman in column 4, lines 13 – 62.

8. Claims 13 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lin, US 6,746,925 as applied to claims 1 and 11 above, and further in view of Kashiwagi, US 6,297,172.

Lin fails to teach plasma treatment performed using oxygen and hydrogen in a flow ratio of 0.01 ~ 0.2.

Art Unit: 2829

Kashiwagi teaches plasma oxidation using oxygen and hydrogen in column 9, lines 65 – 67 for the benefit of providing very thin oxide film with excellent reliability in column 18, lines 50 – 51.

Therefore, it would have been obvious to one with ordinary skill in the art at the time of the invention to modify Lin and form the oxide film by plasma oxidation using oxygen and hydrogen for the benefit of providing very thin oxide film with excellent reliability as taught by Kashiwagi in column 18, lines 50 – 51

9. Claim 16 is rejected under 35 U.S.C. 103(a) as being unpatentable over Lin, US 6,746,925 as applied to claims 1 above, and further in view of Kizilialli, US 6,320,238.

Lin fails to teach implementing the oxygen plasma treatment by illuminating ultraviolet rays on the top of the substrate.

Kizilialli teaches illuminating ultraviolet rays to activate the ozone, which can be used for the plasma oxidation process as well-known process in column 4, lines 41 – 50.

Therefore, it would have been obvious to one with ordinary skill in the art at the time of the invention to modify Lin and implement the oxygen plasma treatment by illuminating ultraviolet rays on the top of the substrate by supplying ozone as an oxidizing gas taught by Kizilialli as well-known in the art in column 4, lines 41 – 50.

10. Claims 17 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lin, US 6,746,925 as applied to claims 1 above, and further in view of Kizilialli, US 6,320,238 and Misra, US 6,274,429.

Lin fails to teach annealing process for the plasma formed oxide film.

Art Unit: 2829

Kizilialli teaches annealing of the oxide film in nitrogen atmosphere at a temperature of 600 ~ 1000°C for the benefit of providing a stress free film in column 4, lines 61 – 65.

Misra teaches oxide annealing for a time of 10 sec ~ 60 min for the benefit of providing good electrical quality to oxide film in column 4, lines 15 – 39.

Therefore, it would have been obvious to one with ordinary skill in the art at the time of the invention to modify Lin and perform an annealing process for plasma deposited oxide film in nitrogen atmosphere at a temperature of 600 ~ 1000°C for a time of 10 sec ~ 60 min for the benefit of providing a stress free film as taught by Kizilalli in column 4, lines 61 – 65 and for the benefit of providing good electrical quality to oxide film as taught by Misra in column 4, lines 15 – 39.

11. Claims 19 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lin, US 6,746,925 in view of Mandelman, US 6,720,630; Kizilialli, US 6,320,238 and Misra, US 6,274,429.

Limitations of these claims have been described earlier in rejecting claims 1 – 10, 17 and 18.

Conclusion

12. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Asok K. Sarkar whose telephone number is 571 272 1970. The examiner can normally be reached on Monday - Friday (8 AM- 5 PM).

Art Unit: 2829

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kammie Cuneo can be reached on 571 272 1957. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

13. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
